

## Powder Coated Metal

The powder coat process produces thick, durable finishes formulated to match standard Egan components. A finely milled pigment is electrically charged and applied to grounded metal components, and then cured to high temperatures. The process eliminates overspray and solvents associated with spray painting operations.

## Tackable Surfaces

Tackable fabric panels are covered in EganFabric—a neutral Putty/Charcoal color stable polyester fabric that compliments the full range of Egan Standard and Custom Color finish choices. The Egan Fabric Program (EFP) also offers thousands of tackable fabrics from Maharam. Egan tackable Natural Cork (NC) is a truly natural product and variation in appearance is to be expected. Available on select products at the Grade A Tackable upcharge.

## Anodized Aluminum

The anodizing process produces a tough durable finish with manufacturing consistency and color control that meets or exceeds world-class standards for process techniques and environmental concerns. Clear natural anodized aluminum components are standard where detailed.

1-800-645-3943

Egan has a synergy program with Maharam Fabrics to offer thousands of tackable fabrics. The grade level of the fabric determines the upcharge cost. This cost is added to the total cost of the product and options. See the Egan Binder Custom Response section for a Grade A sample card, contact 1-800-645-3943 to order samples from Maharam, or visit [www.egan.com/efp](http://www.egan.com/efp) to see samples of available fabric.

## Egan Versa Presentation Surface™ (EVS)

EVS is an Egan exclusive, guaranteed-to-clean dry-erase markerboard surface. EVS Projection is also a highly effective projection surface and features a full 160° comfortable viewing angle (without hot spots or glare), without dimming the lights. When mounted on steel, EVS will also accept magnetic accessories. Introduced in 2002, EVS has inspired the creation of various whiteboard and projection screen products and accessory offerings.

### Dry-Erase Surface Options

**EVS Write** has a matte-white finish with a gloss value of 40°. **EVS Projection** surface has a matte-white finish with a gloss value of 30°. A 60° Gloss Meter was used to establish above values. The color specification for both forms of EVS is: L: 95.49 a: +0.37, b: -2.88.

- EVS base is .005" (127mm) white polyester
- Flammability passes ASTM E-84, material tested on Glass Reinforced Cement Board Class A for most authorities having jurisdiction
- Coating hardness passes 100 cycles using a 1" finger and 0000 steel wool on Crockmeter
- 24-hour resistance to 29 chemicals including Acetone, Clorox™ wipes, Gasoline, Sharpie™ Permanent Marker and Red food dye

### EVS Dry-Erase Surfaces

### Swatches on the cover of this guide

- |             |              |                  |
|-------------|--------------|------------------|
| 1 Beige     | 6 Chiffon    | 11 Brittany Blue |
| 2 Maharam B | 7 Maharam C  | 12 Hunter Green  |
| 3 Maple     | 8 Etex Slate | 13 Juarez Flower |
| 4 GunMetal  | 9 Bermuda    | 14 Natural       |
| 5 Dresden   | 10 Clay Pink | 15 Peach Sand    |

### Dry-Erase Porcelain Surfaces

- Egan Porcelains are a ceramic finish fused to light gauge steel
- Accept magnetic accessories
- Feature gloss value of 65°, when using a 60° Gloss Meter

**EganBoard Porcelain** on steel dry-erase writing surface. Color specification is: L: 88.04, a: +0.72, b: +7.88. The off-white color improves contrast and readability in some situations.

**White Porcelain** (*Special volume orders only*) on steel, dry-erase. Writing surface color specification is: L: 90.12 a: -.45 b: 3.37

# Custom Colors

Our color engineers are experienced in matching most color specifying tools including Pantone Matching System™, Wilsonart® solid color, matte-finish laminates samples and customer supplied samples (colors shown here are pre-formatted, frequently requested colors).

## Eco Friendly Etex Standard Coatings

Etex coatings are solid finishes that are impregnated with polystyrene particles, creating a slight texture to hide fingerprints. This provides a very durable finish with soft edging, and eliminates objectionable seams. Smooth Etex has a durable satin finish and is virtually maintenance-free.

- Egan Etex and Egan Smooth Etex colors use high-quality, colorfast and environmentally friendly water-based coatings.
- Egan Etex coatings meet the most stringent air quality standards, with Volatile Organic Compound (V.O.C.) content measured at 85g/100 to 90g/100. Egan Aluminum coatings have Volatile Organic Compound (V.O.C.) content measured at 57g/100.
- Low emission coatings are applied in automated environments that eliminate over spray and minimize waste. "Sealed system" environments heat cure the finish to eliminate "open air" dry time.
- None of Egan's water-based coatings contain banned compounds.

## ABS Standard Colors

EganSystem Track, as well as the framing and corner assemblies for all components, are cast and extruded ABS plastic. This integral color insures the product's durability when handled or repositioned on the EganSystem Track.

## Wood Finishes

All veneers are finished in a fast curing two component lacquer which provides a durable open-grain silk matte finish. Highest quality hand laid-up, center book matched veneers (1/64"-1/32") and matching hardwood frames which are purchased from FSC certified vendors, are protected by a durable, easy to maintain lacquer coating.
