IMPORTANT NOTES on TeamBoard for Linux

- TeamBoard for Linux only supports USB connections
- You will need to download Java for Linux that you can get from <http://java.sun.com/javase/downloads/index.jsp>
- In order to install TeamBoard for Linux, you must be logged on as Root user in the Terminal window: Type su and then the password
- The zipped file must be extracted to the desktop which will create a Setup file and Opt folder
- The Setup command to use for Debian and Fedora is "sh setup"
- The Setup command to use for Suse and Ubuntu is "./setup"
- When the TeamBoard Install screen appears please select the following OS:
 - Debian – Debian Etch
 - Fedora – Fedora 9
 - Suse – Suse 11
 - Ubuntu 8.04 – Hardy
 - Ubuntu 8.1 - Intrepid

For the TeamBoard IR, you need to select Invert Y from the Console icon on the Linux Desktop under TeamBoard properties after the install.
